6SENSE CLAY GONG CRM SALESLOFT

SMART SUMMARY

Summary

The interview covers the expert's experience with Actively and other go-to-market tools, focusing on their integration, ROI, and role in the sales process. The discussion also addresses tool evaluation criteria, tech stack consolidation, and future plans for expanding Actively's use.

EXPERT BACKGROUND

- Former Vice President of Sales at an HCM platform provider for small businesses, overseeing all revenue functions including sales development, account executives, account development, strategy operations, and sales specialists, with direct experience implementing and managing go-to-market tech stacks and AI tools.

EXPERT SENTIMENT

- The expert is highly positive about Actively, citing significant ROI and effectiveness in surfacing high-value accounts for re-engagement, but acknowledges that its value is currently specialized and could be replaced if other tools develop similar features.
- The expert is open to consolidating the tech stack and is actively evaluating whether Actively or other tools like Clay or Hightouch will be the best fit for future needs, emphasizing the importance of ROI, usability, and long-term viability.
- The expert sees ongoing consolidation in the go-to-market software space and believes that while Actively has potential, larger players may eventually subsume its functionality.

TAKEAWAYS

- Actively is primarily used for re-engaging closed-lost opportunities, generating substantial ROI (about 6X in the current fiscal year) and is considered one of the most effective tools in the tech stack for this purpose.
- The tool is integrated with Salesforce and operates by surfacing high-intent accounts to SDRs and AEs, who act on these within a defined attribution window; users do not interact directly with Actively outside of Salesforce.
- The organization is considering expanding Actively's use to existing customer base for upsell and cross-sell, but is also evaluating alternative tools like Hightouch and monitoring whether Clay or Gong will develop similar features.
- Implementation of Actively was quick, with initial piloting on a small SDR group and rapid demonstration of ROI, leading to broader adoption.
- The expert rates Actively highly (initially a 10, later adjusted to 8), noting that broader applicability across the business could increase its value further.

Expert Bio

Vice President of Sales at Justworks, a customer of Actively AI. Vice President of Sales at Justworks. The expert oversees sales operations for the East Coast. The expert is part of the team that evaluates and procures vendors for GTM support, including Actively and 6Sense.

Interview Transcript

Client 00:00:00

Hi. Thanks for taking the time to talk with me. I am interested in learning more about Actively. Can you share a brief overview of your background?

Expert 00:00:11

Sure. I am the head of sales, so I oversee all revenue functions as it relates to booking, top of funnel on the SDR side. I oversee our account executives which are our full cycle sales obviously working pipeline that is distributed to them through the SDR channel, the inbound channel, the partnerships channel and then on their own generated pipeline.

I have an account development team which is responsible for upsell and cross sell into the base. I have a strategy ops team under me and then I have sales specialists which are our version of sales engineers. All of those functions sit under me and my organization.

Justworks is an HCM platform for small businesses from two to 150 employees to be able to outsource anything from payroll to HR to benefits compliance, employment domestically and internationally, but really serve as the back end partner for small businesses to be able to focus on growing and scaling their own business.

Client 00:01:10

Understood. How large is your organization?

Expert 00:01:15

My specific team is around 300 individuals and then as a company we're around 1,500.

Client 00:01:23

How many SDRs and AEs are there within your team?

Expert 00:01:28

We have around 40-45 SDRs.

Client 00:01:32

Understood. Would you be able to walk me through your overall go-to-market tech stacks?

Expert 00:01:38

It's a laundry list. Our CRM is Salesforce. We use Salesloft as our cadence management system. I'm just going through my mental list of the tools that we have in place today. We use 6sense. We use Actively, Clay. Our sellers have LinkedIn. We use something called Momentum. We use Gong. I don't know how relevant it is, but for intent data and intent information on new and existing customers, we leverage both HockeyStack and then we also leverage, I'm drawing a blank, the name will come to me, but it's an enrichment platform that we use for intent data.

Client 00:02:19

Understood. Would you be able to walk me through what you're using 6sense for?

Expert 00:02:26

We used to use ZoomInfo. We used 6sense for our sellers to be able to prospect an outbound. We primarily switched from ZoomInfo to 6sense due to the intent signals that 6sense was able to show us and our team, being able to go out to more targeted accounts, have better penetration into the accounts, know when accounts were looking for payroll services or HR or benefits. We ultimately made a switch them about two years ago, but we are in the process actually of exploring other options.

©2026, AlphaSense, Inc. All Rights Reserved. AlphaSense is a service mark of AlphaSense, Inc. All other trademarks mentioned belong to their respective owners.

Client 00:03:00

Just going down the laundry list of providers you've mentioned. What are you using Actively for?

Expert 00:03:06

Actively is one of our favorite tools because it has produced some of the largest ROI from any tool that we've purchased. We primarily leverage Actively to be able to engage on the accounts that we have in Salesforce today. We leveraged it originally for closed-lost, but it's a scoring model for us that it will take different signals on top of the conversations that we've had.

We focused it on the closed-lost opportunities and we've generated just from this year, about a million dollars in revenue for us, which is pretty substantial from a tool that did not cost nearly as much. This is our second year leveraging it. It's primarily used for closed-lost re-engagement. They are pushing for us to leverage them for revenue expansion, which is selling into our existing customer base. We are exploring leveraging the Actively tool for our existing customer base. Right now, it's just on new business.

Client 00:04:07

Understood. Just in the interest of time, really quickly, what are you using Clay, Momentum, and Gong for?

Expert 00:04:13

Gong is where all of our calls are recorded. Gong has really good information on being able to understand calls, understand sequences. We're starting to move forecasting methodology into Gong. Momentum was solving the gap that Gong did not have with their AI tools, but Gong has gotten much stronger on the AI side. We are exploring to deprecate Momentum.

Clay we are leveraging for pulling information into identify accounts, new accounts that are not in our CRM today and also enriching the existing accounts that would be highly intent and targeted for us to be going after. As an example, one of the things that we use Clay for is we are pushing one of our products which is international employment. We use Clay to identify when companies have international job openings. How do we bring that into our funnel, create cadences that we can then go after those companies with a targeted approach because of what we uncovered through Clay?

Client 00:05:12

Understood. Double clicking onto Actively, how long has your organization been using the tool?

Expert 00:05:19

I think it's just shy of two years.

Client 00:05:21

Why did you decide to evaluate Actively?

Expert 00:05:26

We were looking at different ways to re-engage our opportunities and Actively had actually come referred to us through our network. We know some folks that had invested in Actively so they recommended it to us and we explored it. We did a pilot. Within the pilot, we were able to quickly identify accounts that we were not necessarily re-engaging and were able to reengage during that time.

For us, it was a new tool that we could leverage just because some of our teams were a little bit smaller at the time to be able to activate or reactivate some of our old closed-lost opportunities. I think within the first six months we generated a handful of closed-won deals. From an ROI standpoint, we wanted to see ROI within the first six months and the ROI was about 4X from what we paid for it.

Client 00:06:18

Understood. How much are you currently paying for Actively?

Expert 00:06:23

I don't know offhand. I can find out.

©2026, AlphaSense, Inc. All Rights Reserved. AlphaSense is a service mark of AlphaSense, Inc. All other trademarks mentioned belong to their respective owners.

Client 00:06:27

That would be great if you could find out. Just in terms of your return on investment, you're saying that you're getting 4X as much in sales revenue that you're paying for.

Expert 00:06:39

In our first six months, yes. I would say now, once I have the number, which I just messaged somebody to grab for me, I can give you a better ROI. What we're receiving right now, but I can tell you right now it's nowhere near what we're generating from a revenue standpoint and we're only six months into our fiscal year. Our fiscal year is June to May, so we measure the impact on a fiscal year and we're about six month. Assuming that we pay between $100,000 and $200,000, we've generated around 5X ROI so far. I will confirm in a moment.

Client 00:07:16

Understood. What other tools did you evaluate Actively against?

Expert 00:07:25

We actually didn't. We had explored Actively. We weren't necessarily looking at the time. Like I mentioned, it had gotten recommended to us. We did a quick search on platforms that were out there, but we felt pretty comfortable with Actively, so we didn't really go through a formal RFP or evaluate other tools as it related to this specifically.

Client 00:07:47

Understood. What was the specific use case that Actively provided that your existing tech stack wasn't able to do? Why did you feel the need to onboard them as an additional vendor?

Expert 00:08:01

We had nothing in place. Our tech stack has evolved pretty quickly in the last call it 18-24 months. Actively was one of the first AI tools that we adopted as an organization. Outside of that, the only thing that we were leveraging was Gong. A lot of our work was manual to identify what was happening in closed-lost opportunities.

Managers were spending time, whereas Actively is bubbling up those opportunities to AEs, to SDRs, to our partnerships team. Being able to say this is a targeted account that you should be going after and here's why based on the signals that we've identified. For us, Actively AI was the stepping stone into the different AI tools and AI stack that we have now adopted fast forward 18-24 months later. We were doing something.

Client 00:08:55

With the other providers like Clay and Momentum, etc., those all stood up after you started using Actively, is that correct?

Expert 00:09:04

Correct. Clay is more on the signal/procurement data enrichment standpoint, which then funnels into Salesforce where Actively would grab and score that information and recommend it to an SDR or an AE.

Client 00:09:18

I'd love to dig a bit deeper here. Would you be able to walk me through how Actively AI fits into your workflow or your SDRs' workflow?

Expert 00:09:28

From an SDR standpoint, they receive an identified account list. They don't engage with the tool. They're just receiving the account list within Salesforce, identified as high intent accounts that they should be going after. Those accounts are prioritized and we monitor it using some redash queries to make sure that those accounts are being targeted within a window that we know we should be acting on.

The way that Actively works is that or the way that we think about attribution with Actively, Actively will suggest an opportunity or an account and it has to be worked within an attribution window for us to designate it that it came through Actively. I think the designation window, I think it's about, I think it's four weeks. We've evolved it over time with them. Essentially, the SDR will get notified about these accounts when they log in or an AE and they'll be able to go after those and they'll understand why and it will see why that account was targeted from Actively.

©2026, AlphaSense, Inc. All Rights Reserved. AlphaSense is a service mark of AlphaSense, Inc. All other trademarks mentioned belong to their respective owners.

Client 00:10:30
What happens after the four weeks? Say for example, they don't interact with the customer, but they are like aware that that's a customer that they should be going after. How does designation work then?

Expert 00:10:43
It will not pull that it was like an Actively-based account anymore if it's not in that window.

Client 00:10:48
What does that mean?

Expert 00:10:51
As an example, we've closed from Actively and how many pipeline opportunities that we've created from Actively in the last six months, this only includes deals or opportunities that were within that window. Meaning it had to be action for us to attribute it to Actively, otherwise it is no longer attributed to it.

The sellers might still be working those opportunities in those accounts, but the reason why is because when it's pulling intent information from first and third party, it needs to be actioned pretty quickly, otherwise that information goes stale. As an example, if somebody's going to be hiring an employee, there's likelihood that that is no longer the case a month later. That information becomes stale. That is why we are very specific on the attribution window for any of our tools.

Client 00:11:40
Understood. The way that I should be thinking about it is that it's like a mutually beneficial thing that designations happen within the four weeks. Is that correct?

Expert 00:11:51
Correct. We've done this on our own using Clay as well. It depends on the business. One of our triggers as an example are hiring events. We know the further out you go from when a hiring event is listed, the likelihood that that position has already been filled is pretty good two, three, four weeks later. Again, it depends on the type of company and what your product is. You have to act on it pretty quickly because that's what you're leveraging to also reach out to that company.

As an example, we'll use Clay to enrich. We'll use Actively to identify the accounts and then we'll use Salesloft to run the cadence. The cadence is already created leveraging Clay and it's relevant to the information that we pulled. If I'm reaching out to you about a hiring position that you have or a product, that's based on information that we pulled whatever weeks ago, and that's why we have to act on it pretty quick.

Client 00:12:48
Got you. I have a few follow up questions here. The first one is how does Actively, Salesforce, Clay, etc., work together in your setup? I understand that Actively is integrated with your CRM, but are they integrated with any other provider?

Expert 00:13:07
Sorry, which tool?

Client 00:13:09
Actively?

Expert 00:13:10
No. Actively is through Salesforce. The way that our stack works is that Clay is pulling information from a host of different sites and parties to enrich our platform. Whether those accounts are in Salesforce or not is when Actively gets leverage. If it's in Salesforce, Actively would grab it, it would score it and recommend it to that SDR or to that AE. If that account doesn't exist today, we will leverage Clay to be able to create accounts within Salesforce and be able to do outreach through Salesloft. Does that answer your question?

Client 00:13:47
Yes, that does. Does Actively only pull from your internal data sources?

©2026, AlphaSense, Inc. All Rights Reserved. AlphaSense is a service mark of AlphaSense, Inc. All other trademarks mentioned belong to their respective owners.

Expert 00:13:55
Correct.

Client 00:13:57
That makes sense. Is the process of using Actively the same with like AEs and SDRs?

Expert 00:14:06
Yes. Just a point of clarification, the reason why is because our account executives are also doing their own pipeline generation. Part of their job is acting like a pseudo SDR.

Client 00:14:18
Would you say that's the norm within the industry or no?

Expert 00:14:22
It depends on your target market. We go after SMB. Our sales cycle is about two months. Right now, from a pipeline creation and generation standpoint, our account executives make up around 20%-25% of their total business. That's why it's required.

Client 00:14:42
Got you. The other follow-up question that I had was does it feel like Actively is a focused SDR/AE tool or is it something that's more centralized that ties in multiple parts of your sales process together?

Expert 00:14:56
Very good question. I think the way that we use it today, it's just an AE and SDR tool. The way that we are thinking about leveraging it going forward will evolve our perspective and position on the tool. As an example, we are working with Actively today on how we can leverage their platform for our existing customers, which we have in Salesforce we have a lot of information on.

That is not leveraged today for our customers whatsoever. There's an opportunity to enrich a lot of the information that we have and start identifying accounts for our account development team, which is the upsell cross sell team, to proactively reach out to the right accounts at the right time with the right product. That's our focus going into our next fiscal year. Actively is a potential tool that we will leverage.

Client 00:15:46
What are some alternative tools that you're evaluating?

Expert 00:15:49
Let me pull up. Give me one second. I'm just trying to find the name of the tool that we started using. Bear with me one second.

Client 00:15:58
No worries.

Expert 00:16:00
Hightouch is the name of another tool. This is what companies will leverage from intent data standpoint as well. We have primarily been focusing Hightouch to build out our own intent platform within Justworks. It's pretty nuanced the way that we have been thinking about the information that's pulled on our customers. This is why we're exploring whether Justworks is the right move, and Actively, can they be complementary to one another? That evaluation is currently going on.

Client 00:16:30
Are you evaluating any other providers?

Expert 00:16:32
No.

©2026, AlphaSense, Inc. All Rights Reserved. AlphaSense is a service mark of AlphaSense, Inc. All other trademarks mentioned belong to their respective owners.

Client 00:16:34
Understood. Just playing back what I'm hearing about how you're using Actively today. You have it integrated into Salesforce and your SDRs and your AEs don't really know that Actively AI exists as a system itself. They see it only on the Salesforce platform. Is that correct?

Expert 00:16:57
Correct. They know we use Actively. They know Actively identified, but they don't need to engage with the Actively tool.

Client 00:17:06
Understood. Your organization's plan going forward in the next fiscal year is to start leveraging the Actively platform more. Is that correct?

Expert 00:17:16
Correct.

Client 00:17:17
What's the difference then between the capabilities that exist within the Salesforce point of sale solution versus the platform solution?

Expert 00:17:25
I'm not sure I follow your question.

Client 00:17:29
What's the difference between what SDRs are going to be getting out of within Salesforce, within Actively integration with Salesforce versus Actively as a standalone platform?

Expert 00:17:40
Actively only polls for Salesforce accounts. You're limited. If you buy lists, etc., that's great, but you're limited from what platforms Actively can pull from. What we have seen is the combination of leveraging Clay for data enrichment on our platform along with Actively has really poured gas on the way that the tool is being used.

I think Actively will only get you so far. Actively will only get you as far as the closed-lost opportunities that you're looking to re-engage and some of the Salesforce accounts that you have. Unless you're bringing in new accounts or enriching accounts within Salesforce, it's going to be pretty limited.

Client 00:18:21
Does it pull from external data sources?

Expert 00:18:25
Yes, it pulls from I think it's like first and third-party data sources.

Client 00:18:30
What would be the difference then between using Actively as a platform versus using Clay?

Expert 00:18:36
It's a good question. I don't think Actively AI is leveraged as a tool for data enrichment.

Client 00:18:43
Okay. That's the only difference?

©2026, AlphaSense, Inc. All Rights Reserved. AlphaSense is a service mark of AlphaSense, Inc. All other trademarks mentioned belong to their respective owners.

Expert 00:18:47

Also like the signal. Data enrichment and then intent data, that is what we use Clay for. It signals, it's procurement and data enrichment. As an example for Clay, when we action a specific signal, we can pull for those signals, enrich our account and launch cadences through the tool, which we cannot do through Actively.

Client 00:19:10

Understood. It sounds like then, one, you're getting a lot of use out of Clay. Two, it feels like the benefits that Actively provides are very specialized and quite nuanced in a way. Do you see a world where Clay could just replace your use of Actively if they launched a similar feature?

Expert 00:19:31

They probably could, which I think we're seeing across a lot of the tools today. Gong as an example, Actively was a good fit for us because Gong didn't provide us the nuanced AI information that we wanted against our old closed-lost opportunities and would be really manual. Now, Gong has a new AI function which is great, but I don't think it provides at this point the level of data and information that we want to leverage when it comes to re-engaging those opportunities. Down the road, I would probably expect either Clay or Gong to probably launch a similar feature.

Client 00:20:05

Understood. When that happens, would you switch to clay fully?

Expert 00:20:10

Potentially. I can't say that I would or I wouldn't. There's a lot that would go into that decision. Cost, impact, I need to see how it actually functions versus what we use today. I would say that there's potential. We've started to consolidate some of our tools within the revenue organization. Like any sort of tool, like I mentioned earlier, we're reevaluating 6sense, we would do the same for something like this.

Client 00:20:38

Understood. I had two follow-up questions here. The first one is when you're evaluating tools whether to continue using Actively or whether to consolidate or whatnot, what criteria matters to you the most in that decision-making process?

Expert 00:20:55

A couple of things. Obviously, cost and ROI are going to be huge. The use case, whether or not we have tools that are in place today that solve the problem. The actual impact to the sales team. One of the big things that I think that is happening within the SaaS space specifically is teams are over, and we're guilty of the two, teams are overloading their sellers and their SDRs with a lot of different tools that maybe they do similar things, maybe they don't. That becomes knowledge that your teams have to learn, they have to adopt and that change curve can take a while depending on your organization.

When we are evaluating tools, we evaluate whether or not it's a tool that the rep will be using directly or is it a tool that will help a rep do something directly. That is something that we really take into consideration. We always do user testing. That is a requirement of ours. I think those are some of the main areas that we look at. We also are looking for a tool that isn't going to just last us for the next six or 12 months, but we're looking for a tool that for the next couple of years at least will be a viable option for us.

Client 00:22:05

That's super helpful. I had a few questions on the consolidation point that you mentioned earlier. It seems to me that there's a general trend within the industry where organizations want to consolidate their go-to-market tech stack., but they're also in an experimental phase where they're exploring new features and new functionalities that pop up within the market that bigger players like Clay haven't really thought of but are likely to copy in the future. Does that sound correct?

Expert 00:22:35

Correct.

Client 00:22:37

How is your organization thinking about this between the long-term viability of a given solution and experimenting?

©2026, AlphaSense, Inc. All Rights Reserved. AlphaSense is a service mark of AlphaSense, Inc. All other trademarks mentioned belong to their respective owners.

Expert 00:22:44
A couple of things on the experimental side, which some companies do, we launched a sales team specifically focused on testing. We call them labs. They are on the forefront of our sales team as it relates to testing out products and services within our organization. Tools from an external standpoint.

Whether we're using Gemini or GPT on how to do business cases, we leverage that team to help us understand the impact of said thing that we're testing, which has actually been really pretty encouraging for the business. When we then introduce something out to the broader floor, we can say confidently, "We've been testing this with our labs team. Here are some of the areas that we identified that are really exciting. Here are some of the areas that we're focused on to improve."

That's a really tactical motion that we've set in place for this fiscal year, but it's paid dividends in terms of rolling out new things. As it relates to the viability of a product or tool for the next few years, I think we've done a pretty good job because we understand from our businesses standpoint what our two to three-year roadmap looks like, what we need to be focusing on. When we're identifying or exploring options for different tools or tech stack, we are talking about what encompassing the next couple of years.

Our questions are anchored in the current fiscal year, but also our next fiscal year where we're talking about expanding into new countries or expanding into new territories for our sales team or we're going to be launching two to three new products and wanting to understand how that will play into the tech stack that we're evaluating. I do think we do a good job when we are exploring different products incorporating an outlook of a couple of fiscal years.

Client 00:24:29
Understood. Do you think that's the norm within your industry? Do most organizations stand up like experimental labs and think like this or are they approaching it with a we could turn next year and it wouldn't necessarily impact our business type of mindset?

Expert 00:24:46
I think it depends on the size of the company. I know a handful of companies or peers that have launched a similar sort of labs team. It's not uncommon but I think it depends on the size of the organization. We've also just generally seen as a company that when we launch certain products like the adoption curve takes a while. Especially in our space, most companies go through a very similar process when they're evaluating different PEOs or different payroll providers.

Knowing that, implementing change can be pretty difficult because it needs to fit in or we try to make sure it fits into the overall process a customer will go through whether it's with us or with any other provider. Which is why we launched this labs function to really test out and make sure what's the impact of the customer, what's the impact to the seller and then what's the overall satisfaction and return of investment on the tool.

Client 00:25:40
That makes a lot of sense. Following on this, what was the implementation and process to stand up Actively?

Expert 00:25:49
It was about a year and a half ago, almost two years ago. I want to say it was pretty quick. We implemented it from a testing standpoint. We only tested it on the SDR side. We had a small working group on the SDR side that was part of it. We pulled a sample set of opportunities that we were able to give to Actively and then that small working group was able to start actioning those leads within a two-week window.

It was a pretty quick turnaround time that we had with Actively AI. I think we are probably one of their biggest customers from my understanding. We've definitely also provided them quite a bit of feedback on the tool and areas that we would like to see our expansion stuff, but the stand up time for piloting and then getting it implemented was pretty quick.

Client 00:26:38
Understood. Just circling back to the ROI question, did you ever find out how much you're spending with Actively?

Expert 00:26:46
Yes. It's around $160,000Â± because our team has grown since.

Client 00:26:53
Understood. From that, can I basically deduce that the SDRs and AEs are getting over like $600,000 worth of like uplift?

©2026, AlphaSense, Inc. All Rights Reserved. AlphaSense is a service mark of AlphaSense, Inc. All other trademarks mentioned belong to their respective owners.

Expert 00:27:04
The ROI for the current fiscal year is about 6X and we're six months into the fiscal year.

Client 00:27:10
That's awesome. I have a follow-up question on that then. What's in your mind makes Actively's intelligence layer so effective? What makes it so special?

Expert 00:27:22
I don't know if I'm the right person to answer that. I could tell you as a stakeholder. What makes it special is that the account that very rarely do we implement tools where our sellers are pretty excited when they're getting notified about something. The fact that our AEs and our SDRs are excited when they have an Actively identified account tells you that the system is effective in raising up the best accounts for account executives to be able to go after those accounts.

It'll pull from meetings you had, it'll pull from Slack, it can pull from emails, from docs. That's what I think is pretty exciting. When you are reengaging with an old opportunity, you are engaging them with relevant information around previous processes that they had, why they should be reconsidering, why it makes sense for them to do that right now. That to me is what makes it pretty special.

Client 00:28:17
From a user perspective relative to the other solutions that exist within your tech stack, Actively is very effective in that it's extremely informative and the information that they give you is very poignant and clear relative to the other solutions. Is that correct?

Expert 00:28:34
Correct.

Client 00:28:35
Understood. Do you see a world where the platform can make it even better? The Actively AI platform could perform even better than their point solution right now?

Expert 00:28:46
Potentially. If it had the capabilities that Clay has in addition to what Actively does, I think it would be a pretty robust tool. You could then say the same about Clay. If Clay had the functionality that Actively had, Clay would be a high functioning tool. I think in that regard, that's where I would see opportunity.

Client 00:29:06
In a hypothetical world where Clay has these functionalities, how easy would it be for you to switch from Actively to Clay or from Actively to remove Actively AI entirely from your tech stack?

Expert 00:29:18
Assuming that we don't sacrifice functionality and usability, I would say probably it would be pretty easy for us to make a switch.

Client 00:29:26
Got you. That's from a technical perspective, but how about from your SDRs and AEs' jobs outputs perspective. How impactful would that be for their role?

Expert 00:29:38
I would say it would be minimal impact. Again, assuming that there is something in lieu of that, it would be minimal impact for AEs and SDRs. They're on the receiving end of these identified accounts. As long as they continue to get it and as long as it still produces the level of data and information that we've been getting thus far, our sellers would not necessarily be impacted.

Client 00:30:01

That makes complete sense. The other question that I had was do you see applicability beyond SDRs? Applicability of Actively beyond SDR so into things like mid funneling or forecasting or account research or the renewal prep.

Expert 00:30:20

This is what I was mentioning before our upsell cross sell team, which is in our industry, we don't necessarily have renewals. We do see a use case for Actively on our existing customer base and being able to identify trends within a company, being able to leverage Actively to surface the right accounts for us to be reaching out to. Like I mentioned earlier, that is what we are in discussions with them currently on, on expanding into that team.

I absolutely see a use case for this to expand past sales development. We haven't leveraged it as much for mid funnel. We tend to leverage Gong for that for anything that's in pipe or mid funnel. I don't have a good answer for you on whether or not we would use Actively. We have not really explored it that much because Gong is where most of our managers live, where our sellers live, where they're evaluating calls, evaluating deals and forecasting.

Client 00:31:15

Understood. You mentioned that you're in talks actively about using the product to expand into teams for cross sell purposes. What are you currently using in lieu of that?

Expert 00:31:25

That's what I meant. We've been using Hightouch a bit in terms of from an intent signal standpoint. Outside of that, our teams get notified about some intent signals and they are outbounding it, whereas Actively would then be able to surface those right accounts and not only pull intent data, but it can also pull first and third-party information on those companies which again that team is doing somewhat manually today.

Client 00:31:51

Understood. Two questions here. Firstly, how is your experience using Hightouch given that you want to replace it with Actively?

Expert 00:32:00

We're not necessarily replacing it with Actively. Hightouch, we're still building it out right now. We adopted the tool probably in July or August, which was in the start of our fiscal year. Our internal product team, along with our revenue effectiveness team have been building out the functionality for Hightouch. The way that it works is that you start building out different intent signals that you want to pull from and it requires some tweaking, which we've been doing for the last few months. We expect Hightouch to be fully live in a couple of months.

Client 00:32:34

It sounds to me that the go-to-market tech stack in general feels like firstly onboarding a lot of different providers, but then building solutions on top of existing providers and then reassessing your current providers where they have new capabilities and functionalities that you can layer onto your existing tech stack. It feels like a relatively crowded space. I'd love to get your thoughts on as a customer of these providers, like your thoughts on the market and where you see it going in the future.

Expert 00:33:04

For what specifically?

Client 00:33:06

For the entire go-to-market software provider landscape.

Expert 00:33:10

It's a very juicy question. For a lot of the AI tools that are coming up, I get contacted pretty regularly to evaluate AI tools. I think many of the AI tools will come and go. We've seen this for most functioning tools. I think most of them will come and go and I think that the big players will either acquire them or launch their own version of that said thing.

There's unique use cases for certain types of platforms. We didn't talk about it, but there's a company called Cassidy which our team has leveraged quite a bit in terms of being able to evaluate data mitigate tasks that manual tasks that our sales team has to do in terms of reviewing invoices and pulling information and auditing different reports that we have that we need to leverage in order to sign a company.

©2026, AlphaSense, Inc. All Rights Reserved. AlphaSense is a service mark of AlphaSense, Inc. All other trademarks mentioned belong to their respective owners.

I think there's just going to continue to be consolidation. We're also seeing it in my space, specifically in the payroll HCM space. We are constantly seeing it happen where you'll have a ton of consolidation because different HCM providers are launching their own version of a said tool. I think we're going to continue to experience it. While it's exciting that companies will come and they will be a pretty high functioning AI tool, it's a matter of time before some of the bigger players will really be able to build out that functionality.

Client 00:34:33

Understood. On your point of consolidations and the bigger players knocking out some of the smaller players in the market, do you think Actively is a provider that you foresee staying and being competitive?

Expert 00:34:45

It depends. I don't have a good answer. I think that they have the opportunity. Will they scale to a type of Gong? I don't think so. I do think that Actively is showing its ability to provide return to companies. If they're able to continue to do that and show it at different parts of the funnel, I do think that they have an opportunity to stick around.

Client 00:35:08

Do you use Agentforce at all?

Expert 00:35:11

No.

Client 00:35:12

What's the reason for that?

Expert 00:35:15

I just don't think that we've explored.

Client 00:35:18

Understood. Why is that?

Expert 00:35:23

I don't know the use case that we would leverage it for. We've generally used the regular CRM. I don't know if I could speak to the difference of their CRM versus Agentforce.

Client 00:35:36

That's totally fair. Pivoting a bit. Where does Actively rank in your tech stack in terms of importance?

Expert 00:35:47

I'm thinking in my head, I would probably say probably top six.

Client 00:35:51

What would be more important than Actively?

Expert 00:35:54

Our CRM, Gong, our prospecting platforms like 6sense, even though we evaluating 6sense, Salesloft. I look at it as from a tech stack standpoint, what does my team need to do their job effectively and then what is complementary to that?

Client 00:36:11

Would Actively be something that's complementary?

©2026, AlphaSense, Inc. All Rights Reserved. AlphaSense is a service mark of AlphaSense, Inc. All other trademarks mentioned belong to their respective owners.

Expert 00:36:14
Yeah, because they don't need it to do their job. It's a benefit to doing their job more effectively. They need a CRM to be able to house their business. They need Gong to be able to track their calls, identify their calls. They need Salesloft to be able to run cadences. I can justify all the tools that are need to have and then Actively becomes like a borderline need to have/nice to have.

Client 00:36:43
That makes sense. From your perspective, which AI go-to-market tools are firstly gaining momentum, but secondly in your opinion defensible in the future?

Expert 00:36:54
Can you ask that question again?

Client 00:36:57
Of all of the AI go-to-market tools that you've explored and evaluated and used in the past, which one do you see as firstly gaining momentum in the market?

Expert 00:37:06
I think the three that we've seen gain momentum are Clay, Actively, and then Cassidy, which we didn't really talk about much. I mentioned a little bit earlier. Those three tools I think have gained a lot of momentum. Gong is just always going to have momentum and that is what most people are leveraging for their call recordings and call trainings. I think that Clay is an example of a tool that we're seeing a ton of people use. We don't use Apollo, but I hear great things about it and we might consider it down the road. Apollo is another one.

Client 00:37:44
Got you. If you were to predict someone who has the ability to consolidate and capture a big share of this market, would you say Clay is the player or any other ones that come to your head?

Expert 00:37:55
Probably

Client 00:37:56
That makes sense. Final question from me, do you think Actively AI could become a broader platform beyond SDR productivity that it could be used more widely?

Expert 00:38:08
Yes.

Client 00:38:09
Follow on that is do you think that there is a use case for Actively for non-tech businesses?

Expert 00:38:15
100%. If I'm a business that is looking to re-engage with accounts that I'm working with, whether it's existing companies which again we are considering whether it's re-engaging old opportunities and if you don't really have a ton working for you, Actively will very quickly help you get off the ground. I absolutely think so.

Client 00:38:35
The same question for Clay. Do you see a use case for Clay for non-tech businesses? To the best of your understanding, are their customer base normally just tech businesses or anyone in general?

©2026, AlphaSense, Inc. All Rights Reserved. AlphaSense is a service mark of AlphaSense, Inc. All other trademarks mentioned belong to their respective owners.

Expert 00:38:49

It depends on who your ICP is. I'll give you an example. If I'm a more manual business and I know my ICP isn't typically doing things online or posting about certain things, and some of these tools become a little obsolete for those companies. If you're retail, that can be really interesting. If your enterprise. I absolutely think that Clay and Actively can become tools that you're using and you don't have to be in tech or you don't have to be in SaaS. I see use cases for both of them, not in tech.

Client 00:39:22

Got you. Last two questions from me to wrap up. On a scale of zero to 10, how likely are you to recommend Actively AI to a peer or colleague?

Expert 00:39:34

Ten.

Client 00:39:36

Would you be able to give me the justification for that? I know we talked about it earlier in the call but if you could summarize, like specifically why Actively AI would be a 10.

Expert 00:39:46

When a tool pays for itself six or seven times over, but also makes it easier for my sellers to identify the right accounts to go after that we previously did not win and they can engage with them thoughtfully and in a way that gets surfaced to them super easy, to me, that is a great tool for a seller. That's why I would say it's a 10.

Client 00:40:07

Understood. Going through your tech stack, if you were to rate Salesforce on a scale of zero to 10, what would you give it?

Expert 00:40:15

Good question. I shouldn't have said 10. Nothing is ever a 10. I would probably give Salesforce a seven.

Client 00:40:26

How about Salesloft?

Expert 00:40:28

From a functionality standpoint, I think it's also probably around a seven. Whether I think it's the right thing for companies to be leveraging going forward is a different answer.

Client 00:40:39

Would you be able to elaborate on that?

Expert 00:40:42

My two cents on it is that at this point, if you look at all the data that's out there, email cadences are ruining or really hurting on the outbound side. At this point, you can pretty much automate most cadences so you don't need Salesloft for your team. You can probably come up with better ways to engage with your existing and prospective customers and also have your SDRs and AE doing targeted outreach versus just throwing stuff into a cadence.

Client 00:41:12

Understood. That makes a lot of sense. Thank you so much for that. How about 6sense? How would you rate it?

Expert 00:41:25

Four.

©2026, AlphaSense, Inc. All Rights Reserved. AlphaSense is a service mark of AlphaSense, Inc. All other trademarks mentioned belong to their respective owners.

Client 00:41:26
Okay. I'd love to learn why.

Expert 00:41:30
While the intent data and information was definitely exciting for us as a team, it has not proven to be more bountiful than what we had with ZoomInfo. The information that we are looking to access, we can't get good cell phone numbers. The information my team needs to outbound and prospect, 6sense has proven to be much more difficult than other tools that we've evaluated.

Client 00:41:53
Got you. How about Clay?

Expert 00:41:56
I probably give Clay an eight in terms of what it's supposed to do and the way it executes. I would say it's an eight.

Client 00:42:05
Got you. Momentum and Gong?

Expert 00:42:10
Gong, I would say we don't use it to its fullest capability and ability, but I would say Gong is probably an eight as well. Momentum is probably a six.

Client 00:42:20
Understood. Cassidy, which I know we didn't touch on, feels like it's a slightly different use case to where Actively plays in. What would you rate it on a scale of zero to 10?

Expert 00:42:33
Cassidy, I would say a seven because we're still working out some of the kinks with it. I think when it's fully operational, I think it'll probably be one of the best tools that we adopt.

Client 00:42:44
Do you see it like Cassidy at all taking Actively AI's cake?

Expert 00:42:49
No.

Client 00:42:50
Cool. Given like all of these ratings across your various tech stack, would you still be rating Actively a 10 or would it be lower?

Expert 00:43:00
I'd probably put it in the same bucket as Clay, so it's like an eight.

Client 00:43:05
What would get it to a 10?

Expert 00:43:07
If we can start showing use cases for it in other parts of the business, then I think it would get to a 10.

©2026, AlphaSense, Inc. All Rights Reserved. AlphaSense is a service mark of AlphaSense, Inc. All other trademarks mentioned belong to their respective owners.

Client 00:43:13

What are those use cases that you are keen on expanding?

Expert 00:43:17

Existing customer base, like monetization of our existing customer base across different products that we offer.

Client 00:43:24

That's super helpful. Do you think that Actively AI's current capabilities is sufficient to be able to support those use cases and it's more of a customer success manager issue or is it a product issue?

Expert 00:43:37

Ask me in two or three weeks and I'll have a better answer.

Client 00:43:44

Amazing. Thank you so much for your time. This has been extremely helpful. Have a great rest of the day and Thanksgiving.
